

Fazenda Agroforestry, Brazil

Driving a sustainable and profitable green revolution

Balancing local economic needs with environmental protection is vital for long-term prosperity and climate change mitigation efforts in Brazil. This project transforms grassland, degraded by extensive cattle farming, into a mosaic of naturally regenerated savannah and sustainable timber plantations.

Project benefits

SUSTAINABLE DEVELOPMENT GOALS

Increased wages
and job security for people working at the farm

Training sessions on sustainable land-use and emission reduction expertise provided to staff

Job opportunities
created for local people

23,000 tCO₂e
are sequestered on average each year

324 hectares
of land planted with Eucalyptus
