

# Restoration of the Degraded Asubima Forest, Ghana

Restoring damaged lands in Ghana's Asubima forest

Verified Carbon Standard  
A VERRA STANDARD

Overexploitation, bushfires and conversion to agricultural land has resulted in the severe degradation of parts of Ghana's Asubima forests. This project has restored the Asubima forest reserve through assisted natural regeneration and reforestation with native and commercial timber tree species. It has restored natural forest in riparian buffer zones, which sequester carbon, and created stores of high quality timber for local and international markets.

## Project benefits

SUSTAINABLE DEVELOPMENT GOALS

**40% of project participants are female**  
contributing to gender equality in Ghana

**1,000 jobs created**  
contributing to local economic growth

**50,000 tCO<sub>2</sub>e**  
mitigated on average annually

**20,000 hectares**  
have been reforested, increasing forest cover and wildlife
