Welcome to your CDP Water Security Questionnaire 2021

W0. Introduction

W0.1

(W0.1) Give a general description of and introduction to your organization.

Continental AG is the parent company of the Continental Group. In addition to Continental AG, the Continental Group comprises 563 companies, including non-controlled companies. The Continental team is made up of 236,386 employees at a total of 561 locations in the areas of production, research and development, and administration, in 58 countries and markets. Added to this are the distribution locations, with 955 company-owned tire outlets and a total of around 5,000 franchises and operations with a Continental brand presence. The Continental Group is divided into the group sectors Automotive Technologies, Rubber Technologies and Powertrain Technologies. These sectors comprise five business areas with a total of 21 business units (as of January 1, 2021). A business area or business unit is classified according to product requirements, market trends, customer groups and distribution channels. The business areas and business units have overall responsibility for their business, including their results. The legally independent Powertrain business area operates under the name Vitesco Technologies. This has no effect on the financial reporting of the Powertrain business area within the Continental Group. Overall responsibility for managing the company is borne by the Executive Board of Continental Aktiengesellschaft (AG). Each business area is represented by one Executive Board member. To ensure a unified business strategy, an Automotive Board was established in the Automotive Technologies group sector, with the CEO of Continental AG serving as chairman. With the exception of Group Purchasing, the central functions of Continental AG are represented by the chairman of the Executive Board, the chief financial officer and the Executive Board member responsible for Human Relations. They take on the functions required to manage the Continental Group across business areas. These include, in particular, finance, controlling, compliance, law, IT, human relations, sustainability, as well as quality and environment.

</thead>
<tbody>
<tr>
<td>Sufficient amounts of good quality freshwater available for use</td>
<td>Important</td>
<td>Important</td>
<td>While freshwater is not used as an input factor in our products, supplies of freshwater are nevertheless important for both our direct and indirect production processes. In addition to the small quantities of high quality freshwater required for washing and drinking by employees, water resources are important in our direct production processes, particularly within the Tire Division, for cooling as well as for galvanic processes. Supplies of freshwater are also important in the production of many of our critical raw materials including especially natural rubber, various metals (i.e. steel), plastics and resins. Dependency on freshwater resources will become increasingly important for our indirect operations through the procurement of natural rubber in particular, where an initial footprinting assessment indicates most of our water exposure is held. This dependency is especially vulnerable in some dryer areas new to rubber cultivation where physical risks are of greatest concern.</td>

(W1.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Currently we do not depend in any significant way on brackish or recycled water for our direct operations, where use of such sources is nearly zero except in a few isolated plants for cooling purposes. An initial assessment of our supply chain also indicates that such water sources are of lesser importance as compared to freshwater, and where it is used it is primarily for cooling and steam production in the processing of raw materials. An assessment of our indirect water footprint indicates that most of our water exposure lies in key raw materials such as natural rubber that rely primarily on freshwater, and we do not anticipate that this will change in the near future. However, we do expect to expand our use of recycled water within our direct operations in select locations, particularly those facing acute water stress.

W1.4

(W1.4) Do you engage with your value chain on water-related issues?

Yes, our suppliers

W1.4a

(W1.4a) What proportion of suppliers do you request to report on their water use, risks and/or management information and what proportion of your procurement spend does this represent?

Row 1

% of suppliers by number
51-75

% of total procurement spend
26-50

Rationale for this coverage
Continental uses EcoVadis software to obtain information from suppliers and prioritizes those for water disclosure based on strategic materiality and environmental impact thresholds built into the software. All strategic suppliers meeting these criteria are included in the assessment. Suppliers are required to report environmental data indicators among others as a pre-condition for doing business with Continental and the terms are detailed in our supplier agreement. Continental does not actively incentivize suppliers to report their data.

Impact of the engagement and measures of success
All suppliers are required to provide information on the total product and/or raw material acquired by Continental on an annual basis with high water-impact products being flagged should further investigation be required. For the more targeted set of suppliers mentioned above, basic metrics with respect to water withdrawals and discharge are also requested. This information is used internally to assess sourcing and financial risks as well as to indicate hotspots for water and other environmental impacts.

Comment

W1.4b

(W1.4b) Provide details of any other water-related supplier engagement activity.

Type of engagement
Innovation & collaboration

Details of engagement
Educate suppliers about water stewardship and collaboration

% of suppliers by number
Less than 1%

% of total procurement spend
Less than 1%

Rationale for the coverage of your engagement
In a collaboration project with Tier 1 suppliers within the Bravo River Basin in Mexico, we have created a network within the regional production economy to promote resource efficiency and in particular water-use efficiency, which was one of the more important KPIs discussed as part of the engagement. The location of these suppliers within a
designated high-risk water stressed basin was one of the primary motivations for selecting these suppliers in particular.

**Impact of the engagement and measures of success**

Measures to promote and monitor water-use efficiency across the network of suppliers were implemented with the aim of spreading awareness about the water topic and monitoring know-how throughout the group. Progress is assessed in terms of changes in water withdrawals at the site levels per unit of production, with initial results indicating that some reductions in water withdrawals per unit of production were achieved in addition to reduced total water input costs.

**W3.3d**

(W3.3d) Describe your organization’s process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

We applied a variety of water risk assessment tools for the first time in 2018 in order to conduct an initial global assessment of our water risk profile using a wide range of indicators. This assessment was again updated in 2019. This involved using the WRI Aqueduct Tool and WWF Water Risk Filter to screen our global direct operations and Tier 1 suppliers for current and projected water quantity, water quality, regulatory and reputational risks. In addition, we used the Water Footprint Network’s Water Footprint Assessment Tool to help support the quantification of water impacts for key raw materials within our supply chain. These tools were selected due to the wide range of indicators used as well as their general uptake among competitors within our industry in order to ensure consistency in the results. We intend to re-
evaluate these indicators every two years in order to take advantage of any updates to the publicly available datasets and ensure accurate risk profiles for strategy planning purposes. The full update of the water risk assessment was conducted in 2021.

The initial analysis allowed us to determine which production sites and suppliers can be considered at risk from a water quantity or quality perspective. More specifically, we were able to identify basins designated as exhibiting "Extremely High Risk" of baseline water stress, which will be flagged for special attention in the future. The scope of this special attention depends on changes made to our current water policy and remains under discussion.

W4. Risks and opportunities

W4.1

(W4.1) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes, both in direct operations and the rest of our value chain

W4.1a

(W4.1a) How does your organization define substantive financial or strategic impact on your business?

We consider substantive financial or strategic impact to our business to be defined as the highest level of baseline water stress as defined by our global WRI Aqueduct risk analysis (Level 5 - Extremely High Risk), which is a quantitative risk metric indicating the ratio of total annual water withdrawals to total annual renewable water supply within a defined basin. The highest risk level indicates that 80% or more of total water available is being withdrawn for human purposes. We do not currently recognize direct or indirect operational sites located in basins below the 80% threshold as subject to substantive risk, however we may modify this definition in the future to include more sites.

Based on our most recent Aqueduct analysis, six facilities within our direct operations fall within our high risk threshold while one of our priority suppliers (indirect operations) can be categorized as high risk according to our definition.

As a result of this analysis, many of our production sites located in Mexico have been targeted for special water-efficiency measures and engagement with the water topic due to the large number of facilities located within high-risk basins.
W4.1b

(W4.1b) What is the total number of facilities exposed to water risks with the potential to have a substantive financial or strategic impact on your business, and what proportion of your company-wide facilities does this represent?

W4.2

(W4.2) Provide details of identified risks in your direct operations with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

Country/Area & River basin
Merica
Bravo

Type of risk & Primary risk driver
Physical
Increased water stress

Primary potential impact
Constraint to growth

Company-specific description
This basin was designated as extremely high risk in terms of baseline water stress in accordance with the global WRI Aqueduct water risk assessment described above and therefore flagged for our attention. A lack of available freshwater could be a limiting
factor in our productive capacity, particularly in light of our expected growth forecasts in this expanding domestic market and therefore further investigation will be necessary to determine the appropriate engagement/response from a water perspective.

**Timeframe**
1-3 years

**Magnitude of potential impact**
Medium-low

**Likelihood**
Likely

**Are you able to provide a potential financial impact figure?**
Yes, an estimated range

**Potential financial impact figure (currency)**

**Potential financial impact figure - minimum (currency)**
1

**Potential financial impact figure - maximum (currency)**
10,000,000

**Explanation of financial impact**
5,000,000 = average of estimated range of impact (1 - 10,000,000). The calculation of direct financial impact is in the beginning phases only and obtaining precise figures remains difficult at this stage. We have identified an early estimated figure regarding financial impact and have initiated countermeasures to address this impact, however the precise figures remain confidential at present.

**Primary response to risk**
Adopt water efficiency, water reuse, recycling and conservation practices

**Description of response**
ESH Managers and Facilities generally are trained in water-use efficiency and technical solutions to save water.

**Cost of response**
1

**Explanation of cost of response**
All individual measures are calculated at the individual site level and at present are not aggregated at the corporate level.
1 = Figures for cost of response are considered confidential

We have identified an early estimated figure regarding financial impact and have initiated countermeasures to address this impact, however the precise figures remain confidential at present.

**Primary response to risk**

Upstream

Map supplier water risk

**Description of response**

The designation of suppliers from this basin as belonging to the extremely high-risk category was determined based on an initial global water risk assessment and therefore further refinement of the risk assessment and engagement with affected suppliers will be necessary to determine an appropriate and targeted response to lessen risk from water stress.

**Cost of response**

1

**Explanation of cost of response**

Further refinements to the risk assessment using additional indicators shall be conducted using WRI Aqueduct Tool and WWF Water Risk Filter to take into account issues regarding water quality, flooding, rainfall variability and other factors to narrow down the scope of the risk to suppliers within this basin. Subsequent high-level engagement with the supplier shall initiate a deeper assessment based on local knowledge to determine an initial course of action. Such due diligence and risk mitigation planning is not considered to have significant costs at the pre-implementation phase.

1 = Figures for cost of response are considered confidential
W4.3

(W4.3) Have you identified any water-related opportunities with the potential to have a substantive financial or strategic impact on your business?

No

W4.3b

(W4.3b) Why does your organization not consider itself to have water-related opportunities?

<table>
<thead>
<tr>
<th>Primary reason</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opportunities exist, but none with potential to have a substantive financial or strategic impact on business</td>
<td>In some areas of ContiTech business area we provide solutions to save water or to reduce water losses by evaporation. However, this is not a major portion of or business or production costs. Opportunities are regularly elaborated and assessed in our Environmental and in our Engineering departments on Business Area and on location level. If opportunities (e.g. increased water efficiency or water savings) are exceeding the internal threshold of 1* and can be realized (technically) on location level, measures might be implemented. The assessments are done regularly but at least yearly.</td>

W6.5

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?
Yes, direct engagement with policy makers
Yes, trade associations
Yes, other

W6.5a

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?
There is a regular alignment process in place that corresponds to the quarterly Executive Board meetings and decision-making timeline within the Sustainability Committee to ensure that policy implementation within the facility locations and divisional functions are in accordance with overall water policies. This alignment is coordinated by Heads of Environment and EHS Managers in order to ensure that prioritized water programs and policies are carried out by Facility Managers, and that learnings are fed back to higher management and the Executive Board.

W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?
Yes (you may attach the report - this is optional)
continental-annual-report-2020-data.pdf
### W7. Business strategy

#### W7.1

(W7.1) Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?

<table>
<thead>
<tr>
<th>Long-term business objectives</th>
<th>Are water-related issues integrated?</th>
<th>Long-term time horizon (years)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes, water-related issues are integrated</td>
<td>16-20</td>
<td>We monitor both current and long-run projections of water risk indicators critical to our operations for both direct operations and critical supply chain basins on an annual basis using the WRI Aqueduct tool and WWF Water Risk Filter. Water risk indicators considered important to our long-term business objectives and strategic planning include changes in water stress, demand, supply and temporal variability in such supplies. A time horizon of 16-20 years was selected to anticipate changes to key water indicators with enough lead time to consider changes to our procurement strategy for key raw materials and ensure resilience - for example natural rubber plantations require 6-10 years after planting to deliver commodities - as well as to integrate findings into our 2030 sustainability strategy currently under development.</td>
</tr>
</tbody>
</table>

| Strategy for achieving long-term objectives | Are water-related issues are integrated | 16-20 | We monitor both current and long-run projections of water risk indicators critical to our operations for both direct operations and critical supply chain basins on an annual basis using the WRI Aqueduct tool and WWF Water Risk Filter. Water risk indicators considered important to our long-term business objectives and strategic planning include changes in water stress, demand, supply and temporal variability in such supplies. A time horizon of 16-20 years was selected to anticipate changes to key water indicators with enough lead time to consider changes to our procurement strategy for key raw materials and ensure resilience - for example natural rubber plantations require 6-10 years after planting to deliver commodities - as well as to integrate findings into our 2030 sustainability strategy currently under development. |
rubber plantations require 6-10 years after planting to deliver commodities - as well as to integrate findings into our 2030 sustainability strategy currently under development.

Financial planning

No, water-related issues were reviewed but not considered as strategically relevant/significant

16-20

Current and long-term water risk indicators were reviewed as they were for long-term business objectives and strategic planning, however the findings were not determined to be immediately critical from a financial planning point of view. This may change in the future as we develop our water strategy further.

W7.2

(W7.2) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

Row 1

| Water-related CAPEX (+/- % change) | 1 |
| Anticipated forward trend for CAPEX (+/- % change) | 1 |
| Water-related OPEX (+/- % change) | 1 |
| Anticipated forward trend for OPEX (+/- % change) | 1 |

Please explain

Due to the worldwide Covid-19 pandemic investments had to be reduced in 2020. Besides difficulties in predicting future changes in CAPEX/OPEX, we expect these expenditures to remain roughly stable on a pre-pandemic level in next year.

1 = Detailed CAPEX and OPEX figures are considered confidential

W7.3

(W7.3) Does your organization use climate-related scenario analysis to inform its business strategy?

<table>
<thead>
<tr>
<th>Use of climate-related</th>
<th>Comment</th>
</tr>
</thead>
</table>

**W7.3a**

(W7.3a) Has your organization identified any water-related outcomes from your climate-related scenario analysis?

Yes

**W7.3b**

(W7.3b) What water-related outcomes were identified from the use of climate-related scenario analysis, and what was your organization's response?

<table>
<thead>
<tr>
<th>Row</th>
<th>Climate-related scenarios and models applied</th>
<th>Description of possible water-related outcomes</th>
<th>Company response to possible water-related outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Other, please specify RCP 4.5 and RCP 8.5</td>
<td>The RCP 4.5 and RCP 8.5 climate scenarios were used by the WRI Aqueduct Tool as optimistic and business as usual climate scenarios respectively to model changes in water stress and supply over long time horizons (i.e. 2020, 2030 and 2040). These models were used in combination with other indicators to determine where water stress and supply are projected to worsen due to supply side (climate change-related) reasons. We were able to determine that even using the optimistic RCP 4.5 model we will likely see a worsening of water stress due to climate change in several of the high-risk basins where we have direct operations or source raw materials, such as in Mexico.</td>
<td>We anticipate engaging in identified high-risk basins in a more systematic manner moving forward, as indicated by our early efforts to engage with our supply chains in Mexico, due to immediate and long-term water scarcity concerns. This is anticipated to be clarified as part of our 2030 sustainability strategy and implemented over the decade.</td>
</tr>
</tbody>
</table>

**W7.4**

(W7.4) Does your company use an internal price on water?

Row 1

Does your company use an internal price on water?

No, but we are currently exploring water valuation practices

Please explain

Although we are not currently using an internal price on water, we are currently discussing possible options for implementing one at select sites, for example those located within basins that are highly water stressed in anticipation of future water price increases, as part of our 2030 sustainability strategy.

W8. Targets

W8.1

(W8.1) Describe your approach to setting and monitoring water-related targets and/or goals.

<table>
<thead>
<tr>
<th>Levels for targets and/or goals</th>
<th>Monitoring at corporate level</th>
<th>Approach to setting and monitoring targets and/or goals</th>
</tr>
</thead>
</table>
| Company-wide targets and goals | Targets are monitored at the corporate level | Continental has two corporate targets:  
- to reduce total water withdrawals per revenue by 2% annually in regions with low and medium water stress  
- to reduce total water withdrawals per revenue by 4% annually in regions with high water stress.  
The corporate targets have been communicated to the individual production sites, which then must configure their own individual water withdrawal reduction targets and measures based on local circumstances in coordination with the corporate office to ensure that the overall corporate target is achieved by all sites on average. Production sites are responsible for implementing their own water management plans to comply with their individual and corporate-level ambitions by, for example, continually optimising water use on-site or increasing the use of recycled water. |

W8.1a

(W8.1a) Provide details of your water targets that are monitored at the corporate level, and the progress made.

Target reference number
Target 1

Category of target
  Water withdrawals

Level
  Company-wide

Primary motivation
  Reduced environmental impact

Description of target
  The corporate-level target seeks to reduce total water withdrawals per revenue by 2% annually in regions with low and medium water stress.

Quantitative metric
  % reduction per revenue

Baseline year
  2019

Start year
  2019

Target year
  2030

% of target achieved
  0

Please explain
  This target was newly implemented in 2019. Due to the strong decline in production and in sales - caused by the COVID-19 pandemic - the figures of the reporting year 2020 are just slightly comparable to the figures of 2019.

Target reference number
  Target 2

Category of target
  Water withdrawals

Level
  Company-wide

Primary motivation
  Reduced environmental impact

Description of target
The corporate-level target seeks to reduce total water withdrawals per revenue by 4% annually in regions with high water stress.

**Quantitative metric**
- % reduction per revenue

**Baseline year**
- 2019

**Start year**
- 2019

**Target year**
- 2030

**% of target achieved**
- 13

**Please explain**

This target was newly implemented in 2019. Due to the strong decline in production and in sales - caused by the COVID-19 pandemic - the figures of the reporting year 2020 are just slightly comparable to the figures of 2019.

**W9. Verification**

**W9.1**

(W9.1) Do you verify any other water information reported in your CDP disclosure (not already covered by W5.1a)?

No, but we are actively considering verifying within the next two years

**W10. Sign off**

**W-FI**

(W-FI) Use this field to provide any additional information or context that you feel is relevant to your organization’s response. Please note that this field is optional and is not scored.

**W10.1**

(W10.1) Provide details for the person that has signed off (approved) your CDP water response.

<table>
<thead>
<tr>
<th>Job title</th>
<th>Corresponding job category</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**W10.2**

(W10.2) Please indicate whether your organization agrees for CDP to transfer your publicly disclosed data on your impact and risk response strategies to the CEO Water Mandate’s Water Action Hub [applies only to W2.1a (response to impacts), W4.2 and W4.2a (response to risks)].

Yes

**SW. Supply chain module**

**SW0.1**

(SW0.1) What is your organization’s annual revenue for the reporting period?

<table>
<thead>
<tr>
<th>Annual revenue</th>
</tr>
</thead>
<tbody>
<tr>
<td>37,700,000,000</td>
</tr>
</tbody>
</table>

**SW0.2**

(SW0.2) Do you have an ISIN for your organization that you are willing to share with CDP?

Yes

**SW0.2a**

(SW0.2a) Please share your ISIN in the table below.

<table>
<thead>
<tr>
<th>ISIN country code</th>
<th>ISIN numeric identifier (including single check digit)</th>
</tr>
</thead>
<tbody>
<tr>
<td>DE</td>
<td>00054390</td>
</tr>
</tbody>
</table>

**SW1.1**

(SW1.1) Could any of your facilities reported in W5.1 have an impact on a requesting CDP supply chain member?

This is confidential

**SW1.2**

(SW1.2) Are you able to provide geolocation data for your facilities?

<table>
<thead>
<tr>
<th>Are you able to provide geolocation data for your facilities?</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>No, this is confidential data</td>
<td></td>
</tr>
</tbody>
</table>
SW2.1

(SW2.1) Please propose any mutually beneficial water-related projects you could collaborate on with specific CDP supply chain members.

SW2.2

(SW2.2) Have any water projects been implemented due to CDP supply chain member engagement?

No

SW3.1

(SW3.1) Provide any available water intensity values for your organization’s products or services.

Submit your response

In which language are you submitting your response?

English

Please confirm how your response should be handled by CDP

<table>
