Lecture: Software-defined Vehicle

Gilles Mabire, Automotive CTO

June 14th

Transformation of Mobility is our heartbeat

Global Trends revolutionizing E/E Vehicle Architecture

Automated Driving

Cloud Services

IoT

UX Applications

Shared Mobility

36 %

Cars with over-the-air capabilities by 2026

2026

66% of OEMs plan to partner with software firms and system integrator firms

+400 %

New vehicles based on common software platforms grow from 7% today to 35% by 2031

\$640 billion

By 2031 software-based features and services will be a market worth \$640 billion

The Software-defined Vehicle

Our Definition

In a Software-defined Vehicle, functions are enabled by software. Decoupling software from hardware enables swift and continuous development & implementation of new functions and software updates throughout vehicle lifetime.

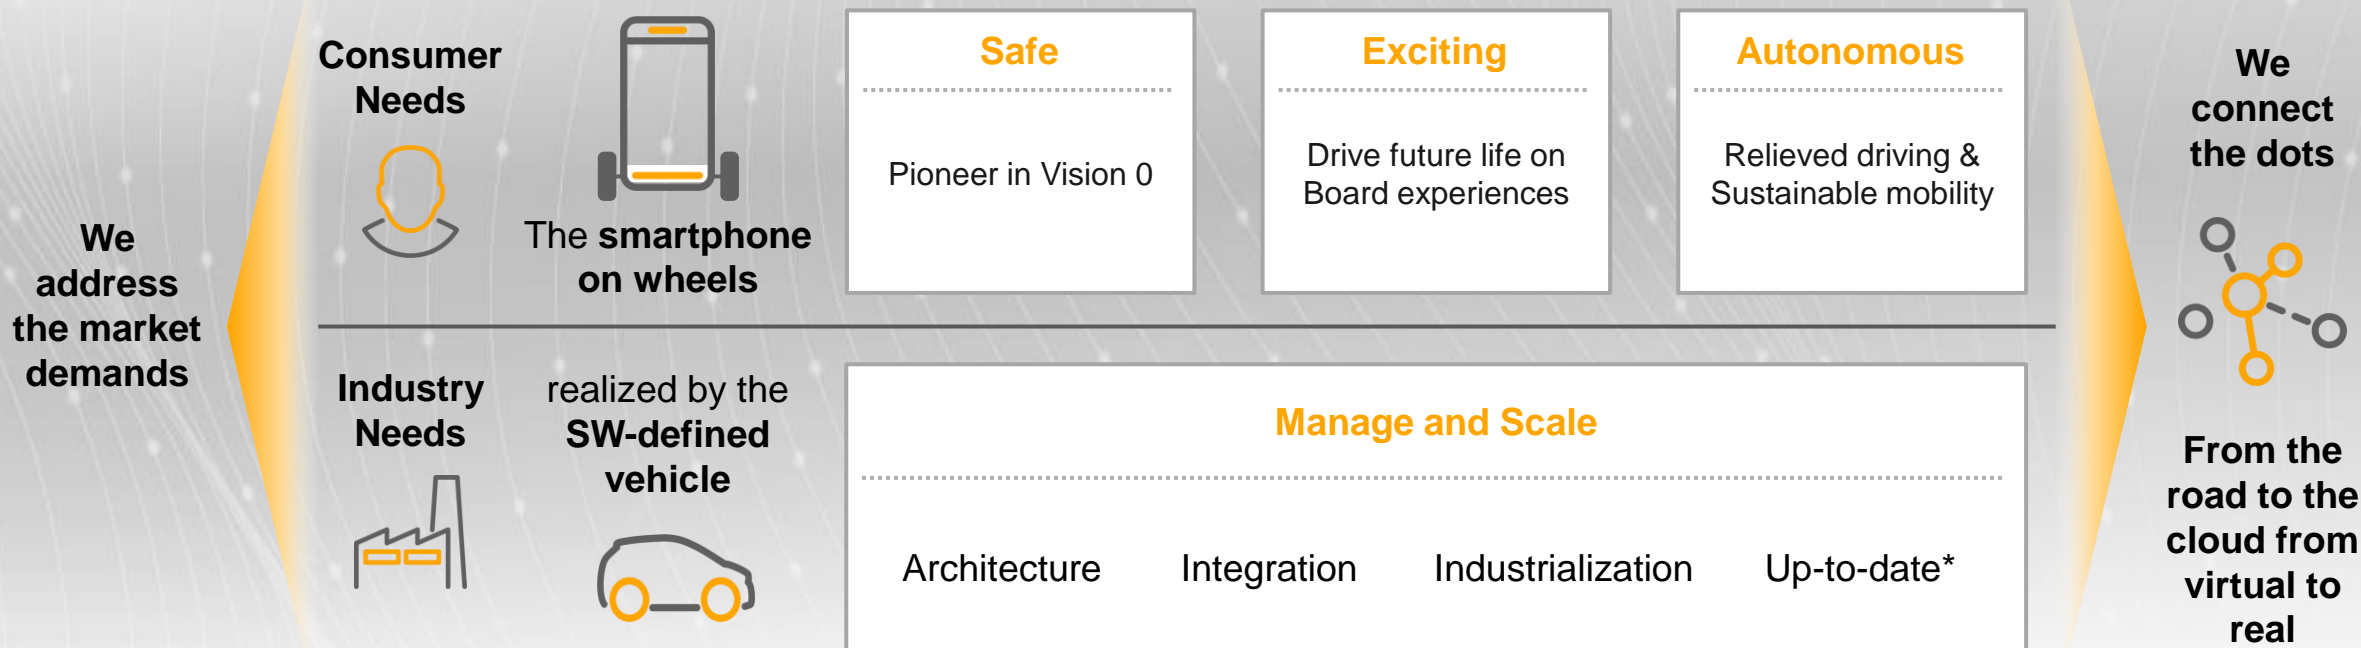

The automobile, which until a few years ago was a self-contained system, has become part of a much more complex software-centric ecosystem – the IoT.

The focus is no longer only on hardware, which nevertheless has a significant importance, but more and more on software.

We Are Connecting The Dots

Experience software-driven future mobility

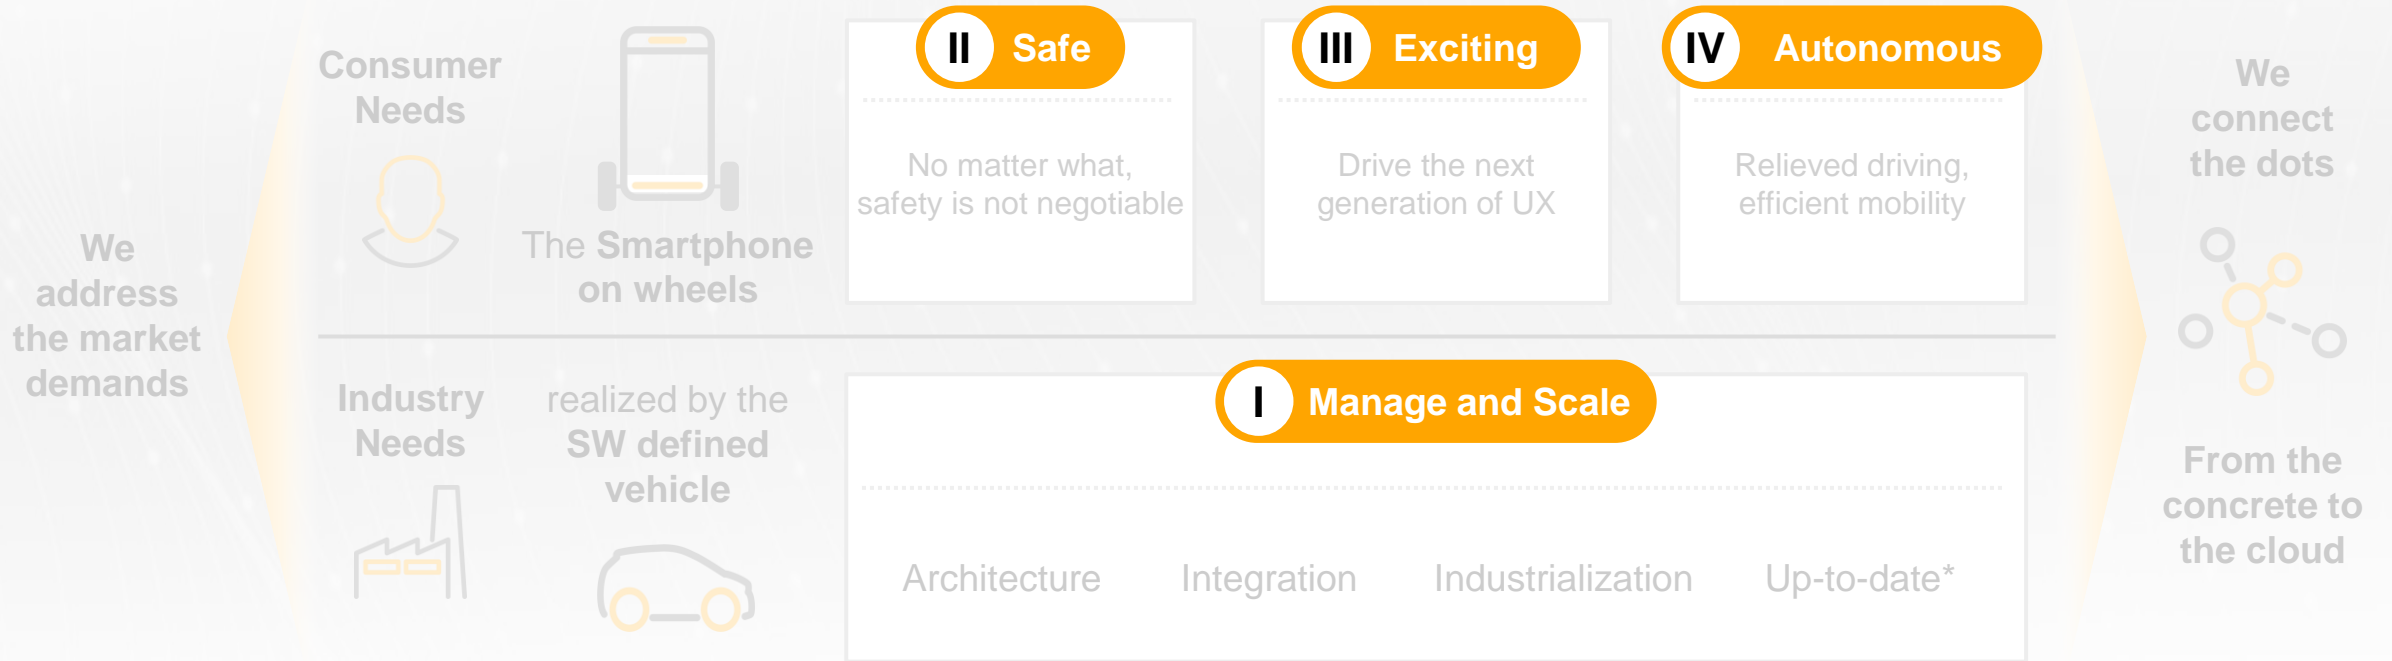

With our expertise across the entire ecosystem, we are the only one able to **connect all the dots** and provide dedicated solutions to support our customers, realize their vision.

* incl. Connected, Cyber Secured, OTA

The Software-defined Vehicle

What to accomplish with the Software-defined Vehicle?

I Manage and Scale

I Manage and Scale

Cloud

From virtual to real

From the road to the cloud

New Architecture with Introduction of HPCs

A radical shift in the automotive industry

I Manage and Scale

REVOLUTION

EVOLUTION

PAST	TODAY	FUTURE
Distributed Architecture	Server-Zone Architecture with domain / x-domain HPCs	Server-Zone Architecture with Central HPC

*HPC: High-Performance Computer

Plug & Play HPC and Fluid Cooling Solution

Flexible and scalable concept

I Manage and Scale

Housing Solutions

- › Modular family concept
- › Scalable for one up to four modules
- › Electrical interconnection between the modules
- › Integrated fluid cooling

Cooling Solutions

- › Different cooling solutions
- › NEW: flexible fluid cooling pad
 - › No TIM* foil necessary
 - › Easy module exchange in service garage

*TIM: Thermal Interface Material

Use Case

Holistic Motion Control

II Safe III Exciting

Driving Functions

-  Safety and Stability
-  Manual Driving
-  Assisted & Automated Driving
-  Selective Driving DNA

Holistic Motion Control Software

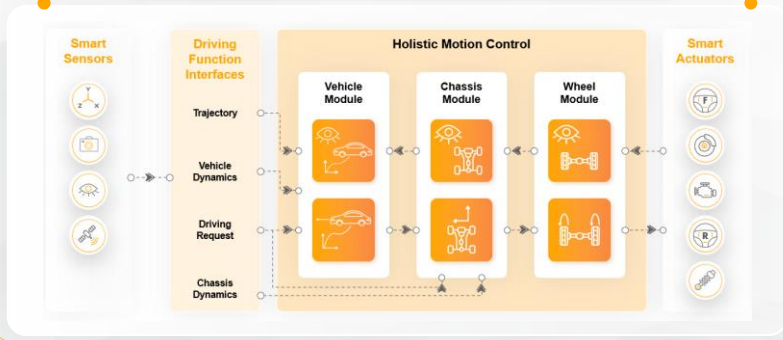

Continental

Benefits & Features

- › **Scalable**
SW product to match stakeholder needs and interfaces
- › **Configurable**
Main- or fallback path for all driving functions
- › **Host independent**
Application SW as a Product
- › **Harmonization**
Between all driving use cases with integrated stability support
- › **Reduced verification**
No sequential application
- › **Smart centralized control allocation**
 - › Orchestrates all motion actuators
 - › Enables actuator redundancy
 - › Realizes OEM specific DNA
 - › Supports energy efficient approach
 - › Optimized for all driving functions

Logical architecture

Use Case

Driver Identification Display

III Exciting

trinamiX
X
Continental

Convenient, touchless and secure solution for driver authentication and mobile payment.

Use Case

SHM AFEELA

III Exciting

- › Elektrobit software, services and expertise helped industry newcomer SHM Sony Honda Mobility to realize the innovative AFEELA prototype
- › Cockpit computers and displays powered by Elektrobit software and integrated by Elektrobit engineering services enable unique, next-gen mobility experience
- › Partnership flips the script on traditional vehicle creation, with software as “the starting point” of development.

Use Case

Aurora System Setup

IV Autonomous

ALL
SENSOR
MODULES
FEATURE

1x Top Sensor Module

With the unique **Aurora lidar** industrialized by Continental, and a combination of long range **imaging radars** and **cameras** from Continental's portfolio

2x Side Sensor Module

Combination of long range **imaging radars**, **far looking cameras** and mid-range **lidar sensors**

Automated Driving Control Units

4 Layers of **Automated Driving Control Units** ranging from main compute (high performance) to basic vehicle controls

3x Sensor module low range

Combination of surround range **radars**, narrow and wide view **cameras** from the Continental portfolio and near-range **lidar**

Cleaning

Sensor heating

Wire harness with
central connector

Easy to maintain
and replace
